

Acapella NN

***TABLE POTATO AND SUITABLE
FOR DEHYDRATION***

NORIKA 

Acapella NN

- Maturity:** first early
- Tubers:** oval, attractive shape, uniform grading, shallow eyes, smooth to netted skin, yellow flesh
- Plant:** intermediate to tall, rapid foliage development and canopy formation, medium number of red-violet flowers
- Consumer:** predominantly firm cooking (type B),
- Quality:** very good taste,
- Processing:** very well suitable for the production of dehydrated potato products
- Resistances:** resistant to potato cyst nematodes Ro1 and Ro4 and to potato wart disease (type 1), very high resistance to PVY and PLRV, almost no hollow heart and bruising, slightly susceptible to scab, medium susceptibility to foliage blight
- Yield:** high yielding, high percentage of marketable tubers, starch content 15 to 16%
- Storability:** very good

Acapella is a high-quality table potato of first early maturity. The variety is also well suitable for the production of dehydrated potato products. Acapella can be used as high-quality raw material for processing much earlier than other varieties.
