

Aktiva NN

TABLE AND PROCESSING POTATO

NORIKA 

Aktiva NN

- Maturity:** second early
- Tubers:** large oval, very attractive shape, smooth skin, shallow eyes, almost no susceptible to bruising, uniform grading
- Plant:** rapid emergence, rapid and vigorous foliage development, rapid canopy formation, good ground cover
- Consumer Quality:** predominantly firm cooking (type B), very good taste
- Processing:** very well suitable for the production of French fries and dehydrated potato products
- Resistances:** resistant to potato cyst nematodes (Ro1, Ro4), medium susceptibility to PVY, high resistance to rhizoctonia and black leg
- Yield:** high
- Storability:** good, long dormancy, stable in quality

Aktiva is a newly cultivated second early predominantly firm cooking table potato. This high-yielding variety is also suitable for the production of French fries and dehydrated potato products.
